Introduction

sunExt Atlantic projects extensive shading and integrates perfectly into the structure of modern and cubist buildings. It is made up of an aluminum structure with a built-in awning.

The modern design in combination with the variety of colors we offer the possibility of different automatic systems (LED, rain, wind, snow sensors, etc.) make it ideal for use in outdoor and semi-outdoor spaces: houses, hotel facilities, restaurants and cafes.

The Pergola is designed to evacuate rainwater, the front pole of the awnings can be lowered between 20 and 40 cm, depending on the size - with motors if desired.

The finish of the profiles can be chosen between white, grey, ivory and black.

Water evacuation system

The Pergola is designed to evacuate rainwater, the front pole of the awnings can be lowered between 20 and 40 cm, depending on the size - with motors if desired.

The finish of the profiles can be chosen between white, grey, ivory and black.
